EDUCATION

University College London, London, UK

PhD Candidate

MRes in Economics

Sep 2021 - present

Sep 2020 - Sep 2021

Duke University, Durham, NC, US

Master of Arts in Economics

Aug 2018 - May 2020

Central University of Finance and Economics, Beijing, China

Bachelor in Economics

Sep 2014 - June 2018

RESEARCH INTERESTS

Primary: Labor Economics, Economics of Ageing

Secondary: Public Policy

JOB MARKET PAPER

Employment Persistence after Raising Pensionable Age: Evidence from Japan

(with Saisawat Samutpradit)

Abstract: This paper examines how raising the pension eligibility age affects retirement behavior in Japan. Using administrative tax data, we analyze a reform that increased the eligibility age for pension benefits from 60 to 61 for certain cohorts. Leveraging a difference-in-differences approach, we find that affected cohorts increased their employment rate at age 60 by approximately 5 percentage points relative to unaffected cohorts. Moreover, the employment effects persisted beyond the new eligibility threshold: affected cohorts remained more likely to work between ages 61 and 64. As a result, the reform induced roughly 60 percent of individuals who otherwise would have exited the labor force to work approximately three additional years on average. This persistent effect is unlikely to be driven by income or wealth effects. Instead, it reflects two key features of Japan's labor market institutions at older ages: (1) workers are mandated to re-sign new contracts at age 60 to continue employment, often involving substantial changes in work arrangements; (2) strong employment protection rules apply until age 65. Our results suggest that policies aimed at extending the working lives of older individuals should not only address demand-side constraints but also facilitate transitions to new job arrangements later in life.
